## **Direxion HCM Weekly Fund Guide: 4-13-07**

### New Original Technology

HCM market call: Bull market

Executive analysis: The bull funds changed from a sell to a buy and coincidentally the bear funds changed from buy to sell signals about four-five weeks ago. The top funds are:

Direxion Latin America	DXZLX
Direxion INV:Emerging M	DXELX
Direxion INV:Commodity	DXCLX
Direxion Developed Mark	DXDLX
Direxion MidCap Bull 2.	DXMLX
Direxion SmallCap Bull	DXRLX

Background: The Direxion funds are volatile long and short mutual funds with leverage up to positive and negative 250%, and therefore professional money management may be necessary. Individual investors and client-centered reps, without access to high quality independent research, may not be successful. These funds are also available in tax-deferred variable annuity contracts.

#### **Value proposition**

HCM provides independent research for 33 Direxion funds with buy and sell signals for each fund, absolute momentum, risk, weeks since last signal, and % gain from last signal. This guide is based on original HCM technology, not available on Wall Street or Main Street and not found in any books. The funds are ranked in order of high to low absolute momentum. Harloff Capital Management acts as a third party money manager and pays B/D and RIA firms up to 110 bps (from our money management fee so referred clients pay no more than non-referred clients), and this payout provides a new profit center for reps. Alternately, HCM sells these and other signals to institutions, see our fee schedule below. Data are thought to be accurate and are not guaranteed. Not actual trades; hypothetical performance. Past performance does not insure future performance. Call HCM for more information. "Rocket Science Helps."

Nav = net asset value

B/S = current buy/sell signal

4 13 2007
